Can-Pack developments

These are turbulent and uncertain times for all of us! Nevertheless, we have intended to send this newsletter to you in order to keep you as closely as possible connected to the developments and the activities that we perform as unions.

5-shifts

We last spoke on this subject on 20 February 2020. In this meeting we think we have found the solution to introduce shift work. The management of Can-Pack Nederland is currently checking the contents of this consultation with the company's central management. The reason for this lies in the fact that Can-Pack does not want open ends and we do not want to return to the supporters with a story for which we do not have 100% permission. However, the measures surrounding the Coronavirus prevent us from holding member meetings with you now. We are counting on your understanding in this matter and cannot help but take a step back. Only when we can meet again with you in meetings will we discuss the shift schedule with you in terms of content.

Coronacrisis

We have been in contact with Can-Pack management on a number of occasions in recent days regarding the measures required to work safely. The distance of 1.5 meters and the hygiene regulations must be observed. One problem is still communicating in the workplace. The employees are still getting too close together. Can-Pack has indicated that it will take measures as soon as possible and will keep the trade unions regularly informed.

So much for this information. As soon as there is more information we will share it with you. These pamphlets may not reach everyone because we do not have the email address of everyone. Be kind enough to at least inform each other.

If you have any questions about rights and obligations during the coronaperiod.
